

1 ABSTRACT OF THE DISCLOSURE

2

3 The invention provides an in-line chromatic harp
4 including a body, a plurality of strings and a string
5 position guide. The body is formed of a pillar, a neck
6 and a sound box. The strings run from the neck to the
7 sound box. The string position guide is movably
8 installed behind the strings, with one end fixed to the
9 pillar and the other end to the neck. This allows a
10 harp player to quickly identify the proper string for
11 each note and to play any chromatic scale as if playing
12 the "C major" scale.
